Enterprise Architecture IS5102

Assignment

2026.10.27

Time – 1 hour

Complete the task and submit the PDF file through the LMS.

Scenario

EduNova University is rapidly expanding its academic programs and digital services. Still, its current systems are highly fragmented with student registration, finance, HR, examinations, LMS, and library platforms all operate separately with no unified login or data sharing. Students face duplicate data entry and inconsistent interfaces, while administrators lack real-time analytics and integrated information. The university aims to modernize using cloud technologies, AI-powered learning analytics, mobile services, and a unified digital experience. The Vice Chancellor requests the ICT Centre to design a complete Enterprise Architecture using the TOGAF ADM to guide future systems, integration, infrastructure, and governance.

Using the TOGAF ADM, develop a complete Enterprise Architecture for EduNova University based on the scenario. In your answer, briefly outline:

1. Preliminary Phase – key stakeholders, scope, and architecture principles.
2. Phase A – the Architecture Vision and expected business value.
3. Phases B, C, D – the target Business, Application, Data, and Technology architectures, including major gaps.
4. Phases E, F – a summarized roadmap and migration plan.
5. Phases G, H – how implementation governance and architecture change management will be handled.
6. Provide a simple 4-layer EA diagram (Business, Application, Data, Technology) in descriptive form.
7. Include EA governance and management controls relevant for a university setting.
